#### 2021 Global Corporate Governance Colloquium

June 11, 2021

#### Motivation

- Extensive debate regarding degree to which shareholders should intervene in company affairs
  - Shareholders vote in directors elections, to amend bylaws, and on fundamental transactions
- Most research centers on the role of institutional investors (mutual funds, pension funds, hedge funds)
- Retail shareholders largely neglected, even though their aggregate ownership is high
  - $\bullet$  Incentives to gather information. Rationally apathetic. Low participation rate
- Recent efforts by the SEC and NYSE to increase retail shareholder participation
- Little is known about the determinants of retail shareholders participation and voting and extent to which their votes correlate with those of institutional investors

### Goals

Impact of retail shareholders on voting outcomes

 Analyze retail shareholders' decision to cast a ballot within a rational choice framework

- Onditional on participation:
  - (i) Factors associated with how shares are voted
  - (ii) Factors associated with the decision to exit

## Shareholder Voting Data

- All annual or special meetings for firms for which the data provider served as the service provider over the period, 2015-2017
  - Data provided under a confidentiality agreement. All data was first anonymized so that individual investor accounts are unidentifiable
- For each firm, data contains voting records, including failures to vote, for each retail shareholder account that has right to vote as of the record date
- Account defined as "retail" if account does not use the online proxy voting product for institutional investors and financial advisers (ProxyEdge) or does not come from third-party vote agents through their Consolidated Data Feed
  - Follow an account's votes across its firms and time using unique code assigned by data provider
  - Include single-client investment offices in our definition of retail, but small number of multi-client family offices may appear in the data
- Each meeting-account level observation includes: (i) firm name, (ii) cusip, (iii) record
  date, (iv) meeting date, (v) number of shares the individual held as of the record date,
  (vi) management's recommendations on each of the proposals, (vii) the shareholder's votes
  on each of the proposals, (viii) the shareholder's zip code, (ix) full text of the proposal

#### Retail Investor Characteristics

| Average Retail Investor Characteristics by Account Value |                        |        |         |         |         |  |  |  |  |
|--|------------------------|--------|---------|---------|---------|--|--|--|--|
|  | Account Value Quintile |        |         |         |         |  |  |  |  |
| Smallest 2 3 4 La  |                        |        |         |         |         |  |  |  |  |
| Number of firms in portfolio                             | 1.47                   | 1.88   | 2.54    | 4.20    | 9.16    |  |  |  |  |
| Account value  | 588                    | 4,077  | 13,131  | 39,814  | 649,064 |  |  |  |  |
| Zip code income  | 89,326                 | 96,830 | 101,238 | 106,746 | 123,510 |  |  |  |  |
| Voting rate  | 0.03                   | 0.05   | 0.07    | 0.09    | 0.15    |  |  |  |  |

<sup>-</sup> Firm purchase rate and firm sale rate are the portion of portfolio firms that have been added or removed in the past year, respectively

- Larger accounts hold more firms, trade less, and perform better than smaller accounts
- Larger accounts locate in higher income zip codes
- Larger accounts vote more often than smaller accounts

 $<sup>-\ \ \</sup>mbox{Zip}$  Code Mean AGI is the mean Adjusted Gross Income in the account's zip code

<sup>-</sup> Voting rate defined as number of ballots cast divided by number of voting opportunities

## Retail Voting by Meeting

|              | R      | etail Votes     | Retail Accounts |                   |  |
|--------------|--------|-----------------|-----------------|-------------------|--|
|              | % Cast | % shares voting | % Cast          | % accounts voting |  |
|              |        | only with mgmt  |                 | only with mgmt    |  |
| All Meetings | 32     | 76              | 11              | 59                |  |

- $\bullet$  Retail voters cast 32% of shares owned, reflecting the decision of only 11% of accounts to participate
- Small retail shareholders are less likely to cast votes
- Small retail shareholders are more likely to oppose management than large shareholders

Retail voting by firm siz

- Set retail participation to zero. Compare change in voting outcome to a similar shock to two other groups of voters: (i) all non-retail shareholders, and (ii) the "Big 3" institutional investors, BlackRock, Vanguard, and State Street
  - Exclude proposals for director elections, and auditor ratification. Remove proposals for which
    the voting base is outstanding shares
- 4 Hold rate of participation and voting choices fixed. Alter the ownership structure of the firm by shifting ownership between retail and non-retail shareholders while holding constant total shares owned, and each group's participation rates and percent in favor
- Ondition on observed participation. Evaluate counterfactual voting rules to retail share-holders. Compare the resulting change in outcomes to that of the Big 3
  - Limit sample to proposals whose final overall vote result is between 40% and 60% of corresponding passing threshold
  - Counterfactuals: (i) Retail voters, (ii) Big 3, (iii) All non-retail shareholders, (iv) All in favor,
     (v) All opposed

• Adopt the canonical political science framework of the decision to vote in political elections. Utility from a voter's participation:

$$U = P \cdot B - C + D$$

- P, the probability that the vote would lead to a change in the outcome from the disfavored choice to the favored choice (probability she is pivotal)
  - Should increase with the account's ownership share of the firm
- B, measured in utility, is the difference between voter's more favored proposal outcome succeeding relative to her preferred proposal outcome failing
  - Sum of (i) the financial benefits from winning, which is the product of the stake size and the dollar benefits to the firm from winning, and (ii) any social benefit from winning, if the shareholder places positive weight on social benefits
- C is the cost of voting
- D is any consumption benefit from voting

- Examine the relation between turnout and proxies for pivotality, costs and benefits from participation, and the interaction among these variables
  - A.1 Does turnout increases with stake size? What is the shape of the relationship between turnout and stake size?
  - A.2 Does turnout increase with the benefit of winning?
  - A.3 Do those shareholders with larger ownership of the firm experience larger benefits from voting?
  - B.1 Do shareholders who own a minute portion of a firm exhibit zero turnout?
  - B.2 Do net benefits from voting extend across different types of elections?
  - B.3 How do shocks to costs affect shareholder turnout?

- Shareholders who own larger stakes in a given firm are more likely to participate in voting, and a given shareholder is more likely to vote at firms she owns more of
- Higher turnout when the financial consequences are greater (special meetings and poorly performing firms, as measured by Tobin's q and ROA)
- Evidence consistent with a multiplicative structure in which larger benefits from voting are experienced most by those with larger ownership of the firm
- Evidence consistent with D > C for at least some shareholders
- Political turnout in the account's county is positively correlated with shareholder turnout
- The bundle of materials that an account receives, which affects both its readily available information and its available voting methods, substantially impacts its likelihood of turning out. Attribute the impact to the loss of the option to vote by mail or telephone (as opposed to internet) when that is the account's preferred voting method

Retail Shareholder Decision to Support Management

## Retail Shareholder Decision to Support Management

A.1 Voting decisions, account-level evidence

A.2 Voting decisions, meeting-level evidence. Permits comparison with non-retail voting decisions

B.1 Decision to exit

## Retail Shareholder Decision to Support Management

- Retail support for the management increases with firm performance
- ISS opposition to management is associated with lower retail support for management. Retail sensitivity significantly lower than that of institutions
- Small retail shareholders are more likely to oppose management (support shareholder) proposals than large account shareholders. Small retail shareholders show higher support for SRI proposals relative to large account shareholders
- Retail shareholders more likely to exit securities on which they voted in opposition to management recommendations, particularly on director elections

#### Conclusions

- Impact of retail shareholders on outcomes
- Evidence on the decision to participate
- Evidence on the decision to support management
- In contrast to the common caricature of retail shareholders as uninformed and apathetic, conditional on participation, these investors seem to provide meaningful feedback to firms through the voting process

Thank you

### Merging Procedures

- Merge of the retail shareholder data with ISS Voting Analytics
  - At the meeting level by 6-digit CUSIP, meeting date, and record date
  - At the proposal level using the order of the proposals within a meeting and their textual descriptions from both datasets
  - Appendix A2.2 describes the proposal matching process
  - For 72% of meetings with director elections, the retail voting sample reports the number of returned votes on the director elections but not votes on each director
- Merge of ISS Voting Analytics with SharkRepellent
  - Unlike ISS Voting Analytics, the SharkRepellent data is unordered. We match proposals by voting results and, using text matching, by proposal categories
- Merge the retail shareholder voting data with CRSP
  - At the 6-digit CUSIP-month level, with the record-date month in the shareholder voting data matching the month for CRSP
  - Restrict the analysis to firms in CRSP with share codes 10 or 11 and with a valid share price and shares outstanding information as of the record month
- Merge the retail shareholder voting data with Compustat/CRSP Merged dataset at the firm level
  - Each meeting merged with the last Compustat fiscal year that ended on or before record date

 Management proposals: Non-retail shareholders are more sensitive to opposition by ISS relative to retail shareholders

R

26

14

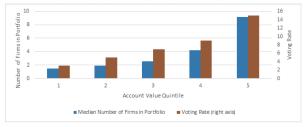

12

25

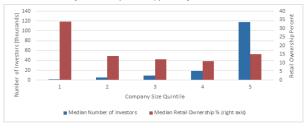

73

- Shareholder proposals: Large differences in response to ISS recommendations. For non-retail, see a
  large decline in support with ISS opposition. For retail voting, the response to ISS recommendations
  is smaller
- Shareholder proposals: Small retail accounts are more supportive of shareholder proposals than are the
  overall retail vote, but still show little response to ISS recommendations

Panel A: Number of firms in the portfolio and voting rate by account value quintile

Panel B: Retail ownership and number of accounts by firm size quintile

## How Shares Are Voted: Registered Owners

- Owners receive proxy materials and cards from a third-party service provider (or transfer agent)
- Their names and addresses are maintained by a transfer agent for the issuer
- Owners send the executed proxies by mail, phone, or through the Internet to a vote tabulator
- Vote tabulator collects and counts proxy votes and in-person votes from the shareholder meeting

#### How Shares Are Voted: Beneficial Owners

- Issuer sets date for the shareholder meeting and a record date. Informs the DTC which forwards to all participants
- Sissuer requests and receives information identifying participant custodians at the DTC with positions in the issuer's securities as of the record date
- 3 DTC executes an "omnibus proxy" transferring its right to vote to its participants
- The issuer sends a search card to all the banks and brokers identified by DTC asking for the number of proxies needed
- Issuer must provide the securities intermediary, or its third-party proxy service provider, with copies of its proxy materials for forwarding to beneficial owners
- Sprokers and bank custodians send beneficial owners the proxy materials including a request for voting instructions, a "voting instruction form"
- Beneficial owners receive the "voting instruction form" and instruct the intermediary by mail, by phone, or through the Internet how to vote
- Securities intermediaries typically retain a proxy service provider. Forward the proxy materials from the issuer by mail or electronically, collect the voting instructions, and submit to the vote tabulator
  - Issuers may also hire **proxy solicitors** when voting returns may not meet state quorum requirements or, in a contested election, management and the dissident also can employ their own proxy solicitors

## Shock to the Cost of Voting and Turnout

- Choice of delivery method
  - Management's strategic use of the dissemination of proxy material (Bach and Metzger (2018), Lee and Souther (2019), Geoffroy (2018), Babenko, Choi, Sen (2019))
- Company and shareholder's choice:

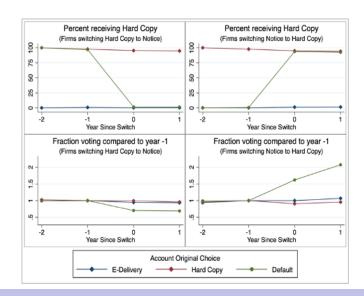

|                       |                         | Firm Choice   |                      |  |  |  |

• Model the impact of delivery method on turnout and voting

### Firm & Account Choice of Receipt of Info Materials and Turnout

First stage:
 Change in materials an account receives:

 Reduced form:
 Change in account turnout after the change in materials:

### Firm & Account Choice of Receipt of Info Materials and Turnout

 SEC's Notice and Access rule: Allows firms to issue a notice of availability of online materials to certain shareholders instead of sending a full package of materials

 The Notice and Access rule affects not just the information materials received by the account but also the methods of voting available to the account

"[W]e are clarifying that the Notice must contain instructions on how to access the proxy card. Such information... may not include a means to execute a proxy, such as a telephone number, which would enable the shareholder to execute a proxy without having access to the proxy statement and annual report."

"We believe that the proxy statement and annual report to security holders represent the information necessary to make an informed voting decision. The Notice is intended merely to make shareholders aware that these proxy materials are available on an Internet Web site; it is not intended to serve as a stand-alone basis for making a voting decision." (emphasis added).

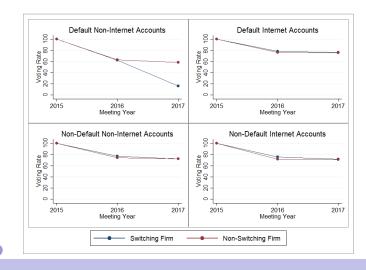

Federal Register (2007), Vol. 72, No. 18, at 4149-4150, available at https://www.sec.gov/rules/final/2007/34-55146fr.pdf.
